

KPI alpha – add new phase

environment:

URL : <http://testshell-03:1977/KpiWebPage/Alpha>

*Team managers are responsible to create new product and phases by kpi.exe at **F:\KPI**

Step 1:

- Go to **C:\Users\Public\Documents\ccmQuery**
- Edit file ccmQA.bat with Notepad++
- Search product name, for example search **RADView** and you see:
 - `py main_Jira.py RADView "7.2.0 - AT&T Phase 4" True >>c:\temp\log.txt 2>&1`
 - product : RADView
 - phase : "7.2.0 - AT&T Phase 4"
- Copy-paste the last row of the product name
- Update the phase part (you get the **phase name** from the product's team manager)
- until the file not updated, the data in the KPI-alpha will not appear

Step 2:

- open Pycharm at **C:\Users\Public\Documents\ccmQuery\kpiGenerator**
- go to file **main_jira.py**
- search the product name
- copy-paste the last query (if version ...)
- update version (phase) and query (you get the query from team manager)
- running once
 - go to runner
 - edit configuration
 - update parameters (**RADView "7.2.0 - AT&T Phase 4" True** – copy from ccmQA.bat)
 - click run
 - should see the data of that query

Step 3:

- go to KPI-alpha
- check all the data are shown in the page
